## Eastwood Rust Prevention and Solutions

### Ways To Remove, Treat and Prevent Rust

Eastwood has been part of the DIY community since 1978, attending car shows, listening to customers, and seeing first-hand how their products are used to produce a vehicle their customers are proud of.

Offering "solutions" which combines our 4,000+ unique products with the know-how to "Do The Job Right".

In-house product design, development and testing with a strong track record of high-quality, innovative products.

Used and trusted by top builders to beginners.

**BEFORE:** We have used a rusty chassis as our illustrated example as they are a common restoration project.

1. Spray on the **Eastwood PRE Painting Prep** (EW10041) helps you prepare a surface for painting by removing dirt, wax, polish, grease, silicone, buffing compound, even road tar, ensuring a clean surface that's ready for final painting.

#### OR

Alternatively Clean rust or corroded metal with a diluted (50:50) **Marine Clean**, a powerful yet water based cleaner. Marine Clean removes dirt, grease, wax and other contaminants that could interfere with your restoration. Rinse off well with water (don't use solvent based degreasers like Prepsol).

(Optional) A rust remover/primer, **Metal Ready** neutralises rust and etches metal for better adhesion. It coats the metal surface with zinc phosphate to encourage deep bonding of Eastwood Rust Encapsulator paint to the base metal and rust. Rinse off with water. Before painting ensure the surface is bone dry. It looks horrible after this step but that's good.

2. Apply your choice of Eastwood Rust Encapsulator paint. It is best to paint when the temp is between 12°-25° C and 10-75 % humidity.

**NOTE:** Before painting ensure the surface is bone dry.

Apply 1 medium wet coat with bristle brush or roller assuring all cavities and areas of corrosion are covered.

Product will be tack-free after 2 hrs.

3. If top coating: apply top coat after 4 hrs., or before 48 hrs

**NOTE:** If a smoother surface finish is desired, product can be mechanically sanded with 320 grit before top coating.

If top coating is desired after 48 hrs., surface must be scuff sanded with 320 grit paper to assure top coat adhesion.

**AFTER:** Done correctly you have now restored the metal for many years to come.

## Eastwood PRE-PAINTING PREP EW10041Z

The final step in surface paint preparation—Eastwood's PRE™ Paint Prep—just spray or wipe on, and wipe off!

- Removes silicone, wax, polish, grease and dirt
- Helps promote paint adhesion
- Easy spray-on, wipe-off application

Proper surface preparation is one of the most important factors in helping you achieve a high-quality final finish. Our specially formulated PRE Paint Prep helps you prepare a surface for painting by removing dirt, wax, polish, grease, silicone, buffing compound, even road tar, ensuring a clean surface that's ready for final painting or powder-coating. Auto paint prep gets no easier!

## Eastwood Rust Encapsulator- Paint Over Rust Stop rust in its tracks!

Superior UV Resistance and Convenient Spray Aerosol or Brushable

**Stop rust in its tracks!** Rust Encapsulator is the easiest way to stop and prevent rust and corrosion from spreading.

- Superior durability (tested to 500 hours in a salt-spray chamber)
- UV Resistance - a topcoat is not needed
- Penetrates deeper to prevent rust from spreading or forming, even in hard-to-reach areas
- Requires minimal prep and cures fast
- Available in convenient spray aerosol or brush on quart and gallon sizes
- Heat resistant to 204°C

### Eastwood Internal Frame Coating

EW12515Z

EW15275Z

In places where little or no surface prep can be done, our Internal Frame Coating is actually a better choice for applying into blind areas such as box sections.

## Eastwood Rust Encapsulator Platinum

### Simply the Best Rust Coating that we have ever offered!

#### WHAT MAKES PLATINUM SUPERIOR TO COMPETITORS' PRODUCTS?

- Beat ALL competitive products in head-to-head Independent lab testing
- Passed over 1,500 hours of salt spray testing
- Tenacious bond permanently fuses to both bare, clean steel and corrosion
- Can be applied directly over surface rust
- Heat resistant to 350 degrees Fahrenheit
- Simple prep – wire brush, degrease and apply
- Easy to apply – brush, roll or spray (spray for best results)
- Can be top-coated with any high quality paint system
- 3X the corrosion protection of our Original Rust Encapsulator
- UV Resistant aluminium pigmented finish

#### Universal Rust Prevention Coating

Developed to be brush, roller or spray applied, this coating is the best foundation and protection of any rusted substrate for use in:

- Automotive
- Marine
- Motorcycle
- Farm and equipment
- Bridges
- Military Vehicle Protection
- Oil and Refinery Pipeline Industry
- Steel buildings, structures and general home and shop uses
